PLANTING

BETTER PLANTS

FOR

1932

CAROLINA HEMLOCK

This year we are offering a particularly fine assortment of first-class, well grown plants - grown to give results. Our stock is well taken care of at all times, transplanted and trimmed when it should be, and delivered to our customers in the best possible condition. Our personnel is competent and our equipment is up to date. The stock is unusual - we specialize in the newer and finer varieties that will appeal to all who love plants. You will find this list particularly interesting.

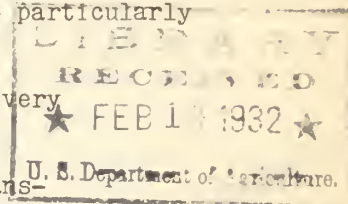

Regarding prices - the nursery business has probably never seen such a slashing of prices as during the last year and a half. This will undoubtedly continue for some time.

Stock grown as we grow it, with plenty of room for ample development of root system and top growth, cannot be offered in competition with closely grown, weakened material which is being so freely offered at near digging cost prices. The wise buyer will not be deceived by this apparent saving which not only makes for poor results but is often actually far more expensive in the end.

The following list is of specimen stock, grown strictly to conform with the high standards of Kelsey-Highlands Nursery. Our prices are not slashed, but are legitimately somewhat lower this year. Examine this list carefully - particularly the rarer items - and let us quote on your needs.

Purchases of quantity lots are, of course, entitled to the very lowest legitimate prices.

All stock listed is nursery grown and two or more times transplanted unless otherwise stated.
